

Crusher Pocket Wall Support

LOCATION:

Eliwana Mine Site – Pilbara, WA

CLIENT:

Downer

DURATION:

6 months

PROJECT SCOPE

Ausdrill successfully completed a crusher pocket wall support project in the Pilbara, WA. The project consisted of 2,800m of 32mm Gewi bar, 3000m² Geobruigg Tecco rockfall mesh system, and 200m³ sprayed fibrecrete. Our large range of new blast hole drill rigs and experienced operators ensured the boreholes were drilled with precision due to the stringent QA/QC requirement of the construction. Our site Management team and Engineers ensured the anchors were tested and compliant with the long-term construction requirement.
