

# Main Ramp Support – Mesh & Bolting

**LOCATION:**  
Rockys Reward Mine Site - Goldfields

**CLIENT:**  
Thiess

**DURATION:**  
18 months

## PROJECT SCOPE

Ausdrill has successfully completed a main access ramp stabilisation project in the Goldfields. The project included installation of 20,000m<sup>2</sup> of a Geobrugg MINAX rockfall mesh system and 20,000 l/m of cablebolts conducted using a ground-based top-down excavation approach. The client's QA/QC requirement was extensive and delivered to our usual high standard.
